

## What is a Steelhead?

The Latin name for Steelhead is *Oncorhynchus mykiss*, but the fish is more familiarly known as “Sea-Run Trout” or “Salmon Trout.” Steelhead are native to the Columbia River and many other Pacific Northwest rivers and streams. The Steelhead species can be found in the wild from Kamchatka in Russia to the Mexico border, but they are best known among sport fishermen in the Pacific Northwest. In fact, Steelhead are often regarded as perhaps the hardest fighting freshwater game fish in North America.

## All American Pacific Seafood Columbia River Steelhead™

Pacific Seafood Aquaculture™ maintains two Steelhead farms on the Columbia River Gorge in the Colville Nation of central Washington state. Our farms have been on the river for nearly two decades, and raise the finest Steelhead available in any market.

## Reduced Carbon Footprint

Why purchase fish that have to take an international flight? Not only is Pacific Seafood® Columbia River Steelhead all-American, from our farms it's much closer to your door, increasing its quality and shelf life, reducing shrink and the overall carbon footprint. It doesn't get fresher than Pacific Seafood Columbia River Steelhead.
