

# Help Us Protect Wild Salmon

PLEASE PLEDGE TO AVOID SOURCING GENETICALLY MODIFIED (GM) FISH

Wild salmon are an important and iconic species in Canada. They are a critical part of our river and ocean ecosystems; they provide us with healthy protein; they support local economies and food security, and salmon are important to the survival and spiritual life of many aboriginal communities. The imminent commercial production of the genetically modified (GM) Atlantic salmon in Canada poses a grave risk to the future of wild salmon populations.

**We are committed to sustainable seafood, and protecting the health of our oceans and the species that reside there: therefore we pledge to avoid sourcing GM salmon products.**

Company Name: Seacore Seafood Inc.

Representative Signature: Sal Battaglia, VP

**Thank you for helping us to protect wild salmon in Canada.**
